Exploring Moon Phase Calendars

Directions:

You have been given a couple pages of a moon phase calendar from the year 2100. Examine them with a partner and answer these questions. We will review them as a class.

1. How many days does it take for the moon to go from small to big and back to small again?

2. Do both cycles have the same number of days?

3. How would you describe the moon right in the middle of the cycle?

4. On which day is the moon easiest to see?

5. On which day is the moon hardest to see?
